Pathology and Genetics of Tumours of the Lung, Pleura, Thymus and Heart is the latest volume in the new WHO series on histological and genetic typing of human tumours. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for the design of studies monitoring response to therapy and clinical outcome.

Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, incidence, age and sex distribution, location, clinical signs and symptoms, pathology, genetics, and predictive factors.

The book, prepared by 200 authors from 25 countries, contains more than 670 color photographs, numerous X-rays, computed tomography (CT), magnetic resonance (MR) images, charts, and more than 2,200 references.
