WORLD HEALTH ORGANIZATION CLASSIFICATION OF TUMOURS

Pathology and Genetics of Head and Neck Tumours is the latest volume in the new WHO series on histological and genetic typing of human tumours. This authoritative, concise reference book provides an international standard for pathologists and oncologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome.

Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all WHO-recognized neoplasms and their variants include new ICD-O codes, incidence, age and sex distribution, location, clinical signs and symptoms, pathology, genetics, and predictive factors.

The book, prepared by 130 authors from 28 countries, contains 890 colour photographs, X-rays, computed tomography (CT), magnetic resonance (MR) images, charts, and more than 2900 references.

ISBN 92 832 2417 5
