Postdoctoral Opportunity

SECTION OF GENETICS / GENETIC EPIDEMIOLOGY GROUP

The Genetic Epidemiology Group (GEP) investigates lifestyle and genetic factors involved in cancer in diverse populations, with the aim of contributing to primary prevention of cancer. An important focus of the group is elucidating etiological factors of cancers poorly explained by currently known risk factors.

These objectives are achieved through international collaborations and the development of large-scale multidisciplinary projects, which integrate epidemiology and genome-wide investigations (large-scale GWAS, exome/genome/transcriptome sequencing) together with medical history and clinical outcome of cancer patients from all over the world.

A postdoctoral opportunity in **Bioinformatics / Computational biology** is immediately available within the Group to contribute to our multidisciplinary cancer studies. Successful candidates should have a strong background in cancer omics and/or genotype imputation, as well as a good command of English.

The postdoctoral opportunity is initially for one year and for candidates who have completed a Ph.D. or equivalent level. The IARC stipend is currently €2820 per month. The cost of travel for the postdoc, and in certain circumstances for dependants, will be met, a dependant's allowance paid, and health insurance covered.

Applicants should send a CV, including list of publications and a description of previous research experience, as well as a motivation letter and the names and addresses of two academic referees, by email to:

Email: gep@iarc.fr (*please mention in the title of your email "Postdoctoral opportunity – Bioinformatics"*)
