

Postdoctoral Opportunity

SECTION OF GENETICS / GENETIC EPIDEMIOLOGY GROUP

The Genetic Epidemiology Group (**GEP**) investigates genetic factors involved in cancer in diverse populations and their interaction with environmental factors, with the aim of contributing to primary prevention of cancer. These objectives are achieved through collaborative international epidemiological and genomic studies, which integrate epidemiology and high throughput genomic methods in a multidisciplinary approach (eg. GWA, whole genome sequencing, transcriptome, and epigenetic analysis). A postdoctoral opportunity is immediately available within the Group to work on large multi-centre studies concerning the genetic epidemiology of lung and kidney cancers. Candidates with a relevant background in genetic epidemiology, bio-informatics, biostatistics, molecular biology or molecular epidemiology and with a good command of English are strongly encouraged to apply.

This postdoctoral opportunity is initially for one year with possibility of renewal for two further years and is suitable for candidates who have completed a Ph.D. or who have acquired equivalent training. The IARC stipend is currently €2700 per month. The cost of travel for the Fellow, and in certain circumstances for dependants, will be met, a dependant's allowance paid, and health insurance covered.

Applicants should send a CV, including list of publications and a description of previous research experience, as well as the names and addresses of two academic referees, to :
