IARC signs comprehensive Memorandum of Understanding with the University of Otago, New Zealand

The International Agency for Research on Cancer (IARC) is pleased to announce the signature of a new Memorandum of Understanding (MoU) with the University of Otago, New Zealand. The MoU focuses on building capacity and specific research collaborations that will strengthen the evidence-base for cancer prevention and control. The areas of focus include cooperation on the development of cancer registration infrastructure in the Pacific region, research studies in the domains of cancer surveillance, aetiology and prevention, as well as exchange programmes supporting the education and training of early-career and senior scientists.
