

Announcing a new

# World Cancer Report

To be published in 2019 by the International Agency for Research on Cancer (IARC)

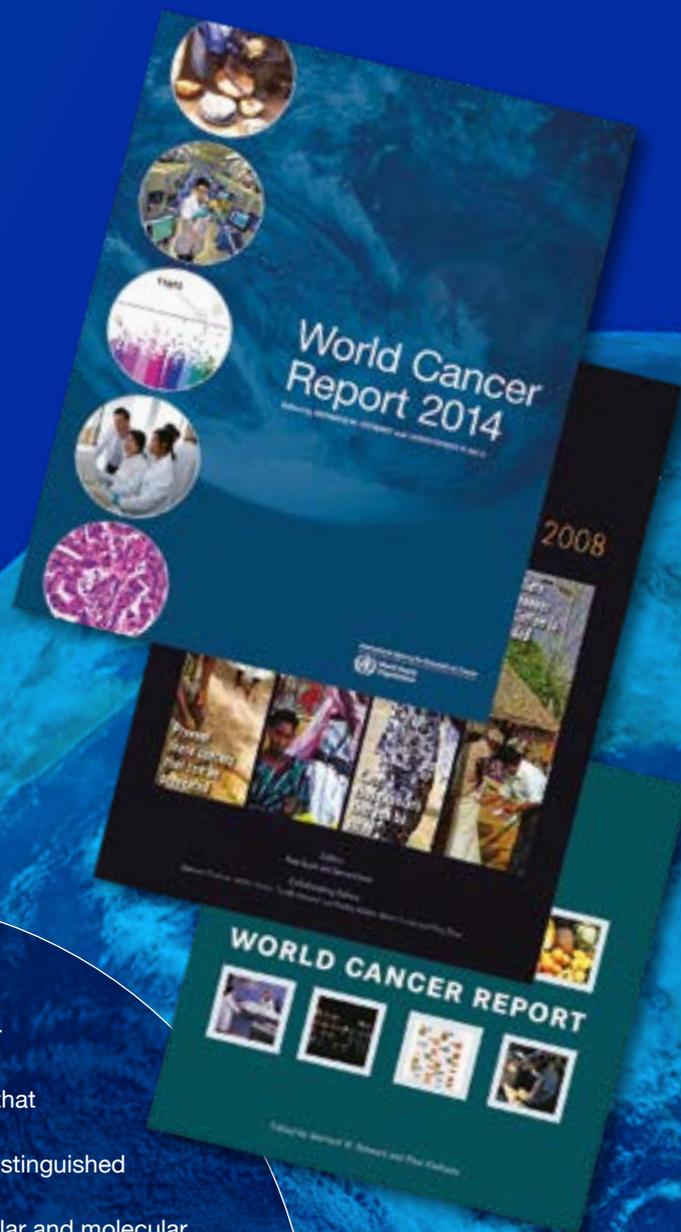

## About the book

- A multidisciplinary publication addressing cancer research
- Focuses on cancer prevention and the research that underpins prevention
- More than 60 chapters, written by hundreds of distinguished scientists from around the world
- Includes descriptive epidemiology, etiology, cellular and molecular biology, toxicology and pathology, behavioural and social sciences, public health, biostatistics, and informatics
- Provides a concise assessment of current knowledge about cancer prevention
- Includes hundreds of informative colour illustrations, photographs, diagrams, and tables

In addition to being of benefit to cancer researchers seeking to update their knowledge, the *World Cancer Report* provides comprehensive insight to health professionals and policy-makers.

## VOLUME EDITORS

**Dr Christopher P. Wild, Director of IARC**  
**Dr Elisabete Weiderpass, Director-Elect of IARC**  
**Dr Bernard W. Stewart, University of New South Wales, Sydney, Australia**

Organization

# Contents

## SECTION 1

### The global cancer burden

- Premature death: cancer from a broad perspective on disease prevention
- Trends in cancer incidence in particular countries and regions
- Human development as a determinant of cancer worldwide

## SECTION 2

### Causes of cancer and hazardous circumstances

- Tobacco smoking
- Infectious agents
- Alcohol drinking
- Sunlight and ultraviolet radiation
- Radiation
- Diet and nutrition
- Physical exercise, sedentary lifestyle, and obesity
- Dietary carcinogens
- Contamination of air, water, soil, and food
- Work-related cancers
- Pharmaceutical drugs
- Consumer products

## SECTION 3

### Biological processes in cancer development

- Sporadic cancer
- Genomics and genome-wide association studies
- Gene–environment interactions
- DNA repair and genetic instability
- Inflammation
- Reproductive and hormonal history
- Metabolic change and metabolomics
- Epigenetic change during tumorigenesis
- Immune function and cancer development
- The microbiome
- Identifying carcinogens from 10 key characteristics

## SECTION 4

### Inequalities affecting cancer prevention

- Current research methods and limitations on study design
- Socioeconomic factors and cancer prevention in Africa
- Cancer in urban and rural communities in China
- Socioeconomic considerations concerning cancer prevention in India
- Variations in implementation of cancer screening in European countries
- Disparities in US cancer prevention services
- Cancer in indigenous populations

## SECTION 5

### Preventing particular tumour types

- Lung cancer
- Head and neck cancer
- Oesophageal cancer
- Stomach cancer
- Colorectal cancer
- Liver cancer
- Pancreatic cancer
- Skin cancer
- Breast cancer
- Cervical cancer
- Endometrial cancer
- Ovarian cancer
- Prostate cancer
- Testicular cancer
- Bladder cancer
- Kidney cancer
- Brain cancer
- Thyroid cancer
- Non-Hodgkin lymphoma
- Leukaemia

## SECTION 6

### The basis for, and outcomes from, prevention strategies

- Changing behaviour
- Smoking cessation
- Improved nutrition and increased exercise
- Vaccination
- Chemoprevention
- Managing people with high and moderate genetic risk
- Screening
- Circulating DNA and other biomarkers for early diagnosis
- Regulation to control carcinogen exposure
- Prevention strategies common to noncommunicable disease
