# Table of Contents

## Section 1: The global cancer burden

1.1  The burden and prevention of premature deaths from noncommunicable diseases and cancer: a global perspective  
1.2  Global trends in cancer incidence and mortality – Transitioning countries in focus  
1.3  Transitions in human development and the global cancer burden  

## Section 2: Causes of cancer, including hazardous circumstances

2.1  Tobacco products – Massive and still growing causes of cancer worldwide  
2.2  Infectious agents – Missed opportunities for prevention  
2.3  Alcohol consumption – A leading risk factor for cancer  
2.4  Sunlight and ultraviolet radiation – Affecting skin cancer incidence in many countries  
2.5  Ionizing radiation and radiofrequency electromagnetic fields – Further clarification of particular risks  
2.6  Diet and nutrition – Understanding which factors are critical  
2.7  Physical activity, sedentary behaviour, and obesity – Established and emerging modifiable risk factors  
2.8  Dietary carcinogens – A continuing concern in various contexts  
2.9  Contamination of air, water, soil, and food – The challenge to characterize specific risks  
2.10  Occupation – The need for continuing vigilance  
2.11  Pharmaceutical drugs – A current focus on hormones  
2.12  Consumer products – Persisting community anxiety  

## Section 3: Biological processes in cancer development

3.1  Sporadic cancer – Tumorigenesis in the absence of an established or avoidable cause  
3.2  Genomics – Susceptibility and somatic patterns  
3.3  Gene–environment interactions – The preventive implications are still not clear  
3.4  DNA repair and genetic instability – Endogenous and exogenous sources of damage and hereditary syndromes  
3.5  Inflammation – Playing a pivotal role in cancer pathogenesis  
3.6  Reproductive and hormonal history – Important contributors to a number of cancer sites  
3.7  Metabolic change and metabolomics – Emerging approaches and new insights  
3.8  Epigenetics – Potential in diagnostics, therapy, and prevention  
3.9  Immune function – From the tumour microenvironment to therapeutic targeting  
3.10  The microbiome – Its influence on tumorigenesis and therapy  
3.11  Identifying carcinogens from 10 key characteristics – A new approach based on mechanisms  

## Section 4: Inequalities affecting cancer prevention

4.1  Inequalities between and within countries – Impact on cancer prevention  
4.2  Socioeconomic factors and cancer prevention in Africa – Cervical cancer as an example  
4.3  Cancer in urban and rural communities in China – Patterns reflecting social dynamics  
4.4  Socioeconomic factors and cancer prevention in India – Diverse interventions needed  
4.5  Variations in implementation of cancer screening in European countries – Striving for best practice  
4.6  Disparities in cancer prevention services in the USA – A long-standing and persistent cause of inequity  
4.7  Cancer in Indigenous populations – Focusing on sometimes-invisible inequalities
Section 5: Preventing particular tumour types

5.1 Lung cancer – Continues to be the leading cause of cancer death
5.2 Head and neck cancer – New etiological insight
5.3 Oesophageal cancer – A tale of two malignancies
5.4 Stomach cancer – Still one of the main cancers worldwide
5.5 Colorectal cancer – Contrasting disparities and promoting prevention are policy priorities
5.6 Liver cancer – An infectious disease for many communities
5.7 Pancreatic cancer – Many risk factors poorly characterized to enable prevention
5.8 Skin cancer – A focus on primary prevention
5.9 Breast cancer – Multiple, often complex, risk factors
5.10 Cervical cancer – Successes in some communities to be extended worldwide
5.11 Endometrial cancer – Preventive through control of obesity
5.12 Ovarian cancer – Origins, and implications for prevention
5.13 Prostate cancer – Challenges for prevention, detection, and treatment
5.14 Testicular cancer – New inroads into early diagnosis
5.15 Bladder cancer – A genotoxic causal agent recognized
5.16 Kidney cancer – Multiple risk factors but currently limited preventive strategies
5.17 Brain cancer – Increasing attention on the immune response
5.18 Thyroid cancer – Predominantly a disease of affluence
5.19 Non-Hodgkin lymphoma – Complex etiology including the role of immune function
5.20 Leukaemia – Understanding pathogenesis through similarities and differences

Section 6: The basis for, and outcomes from, prevention strategies

6.1 Changing behaviour – The need for sustainable implementation
6.2 Smoking cessation – Interventions often succeed once resourced
6.3 Improving diet and nutrition, physical activity, and body weight – Evidence to practice
6.4 Vaccination – The prospect of eliminating some cancers
6.5 Preventive therapy – Certain interventions clearly established
6.6 Managing people with high and moderate genetic risk – Genomic tools for effective cancer risk reduction
6.7 Screening – From biology to public health
6.8 Circulating DNA and other biomarkers for early diagnosis – Great potential but challenges recognized
6.9 Governmental action to control carcinogen exposure – Multiple options covering diverse scenarios
6.10 Prevention strategies common to noncommunicable disease – Focus on tobacco, alcohol, obesity, and inactivity
